

# Tackling Cloud Security Concerns

Businesses across industries like finance and healthcare have begun to employ cloud environments as an integral part of their operations. However, the complex nature of cloud environments present various security challenges like managing configurations, dealing with third-party integrations, and maintaining data security and regulatory compliance. This is where CheckRed's Cloud Security Posture Management (CSPM) comes in. With CheckRed, you can confidently navigate and secure single, multi, and hybrid cloud infrastructure, ensuring the protection and integrity of your valuable data.

## What Cloud Security Posture Management Offers

### Enhanced visibility

Gain a wider view and comprehensive monitoring of your cloud environment

### Risk mitigation

Take control of your cloud infrastructure and minimize potential risk factors

### Continuous compliance

Ensure adherence to compliance standards through ongoing assessments

## Why CheckRed?

CheckRed's CSPM solution simplifies the identification of misconfigurations and security risks in cloud environments. Agentless scanners take only minutes to provide an accurate report and actionable guidance for your team to address any issues. The platform seamlessly integrates with ticketing systems for efficient issue allocation and resolution tracking

With CheckRed CSPM, you gain:

**Risk alert prioritization:** Prevent alert fatigue with detailed risk analytics

**Customizable dashboards:** Navigate critical alerts with ease

**Comprehensive cloud coverage:** Integrate with single and multi-cloud environments

**Compliance monitoring:** Easy compliance checks and reporting

Cloud environments have grown to become the foundation of digital business operations, and traditional security measures often prove inadequate. Utilize CheckRed's robust CSPM solution, harnessing agentless scanning to extend your security coverage. Prioritize a user-centric approach and embrace a zero-trust methodology to bolster the integrity of your cloud infrastructure and safeguard your critical data. Strengthen your security posture with CheckRed, your trusted partner in fortifying cloud security.

## How CheckRed Works

-  **Inspect:** Audit your cloud asset inventory based on customized rules with the help of agentless scanners
-  **Detect:** Uncover any risk with a high degree of accuracy and gain total visibility into SaaS and cloud assets
-  **Prioritize:** Classify alerts based on their severity and steer your focus toward issues that matter the most
-  **Remediate:** Receive personalized recommendations for each detected alert in the form of remediation workflows
-  **Report:** View all pertinent security information on a single dashboard and use the ticketing system to respond to alerts

Cloud Security Challenges		CheckRed's Capabilities
Assets across different clouds	→	Compatible with single & multi clouds
Risk management challenges	→	Misconfiguration assessment
Unauthorized access	→	Least privilege
Privilege abuse	→	Role-based access control
Alert fatigue	→	Alert prioritization
Compliance risks	→	Continuous compliance assessments

## Strengthen Cloud Security

An alliance with CheckRed can empower businesses in their battle against the growing wave of security risks. By partnering with us, you gain access to cutting-edge expertise that enhances your security posture and protects your sensitive data. Securing your cloud environment is crucial in today's digital landscape. Partner with CheckRed to strengthen your defenses, access invaluable resources, and connect with our experts. Together, we can seamlessly navigate the complex domain of single and multi-cloud security. Don't wait - enhance your cloud security posture with CheckRed today.
