

Solving SaaS Security Challenges

Complexity reigns in the world of modern Software as a Service (SaaS) applications. These applications come equipped with a multitude of configuration settings, and they frequently integrate with a web of third-party apps, extending data access, permissions, and privileges beyond the traditional boundaries of the managed environment. This is where CheckRed's SaaS Security Posture Management (SSPM) solution steps in - the frontline defender dedicated to safeguarding your SaaS data. With CheckRed SSPM, you can confidently navigate the intricate landscape of SaaS configurations and interconnected apps, ensuring the protection and integrity of your valuable data.

What SaaS Security Posture Management Offers

Enhanced visibility

Wider visibility and thorough monitoring of your SaaS environment

Minimized risks

Gain control of your SaaS applications and mitigate potential risks

Ensured compliance

Mitigate the risk of violations by continuously assessing compliance

Why CheckRed?

CheckRed's SSPM solution simplifies the process of identifying misconfigurations and potential security risks in SaaS applications. With a quick scan that takes just minutes, you will receive an accurate report and precise guidance for your development team to remediate any issues. CheckRed's seamless integration with ticketing systems ensures efficient issue allocation and resolution tracking.

With CheckRed, you gain:

Holistic inventory: Comprehensive coverage of your SaaS environment

Interactive dashboards: User-friendly insights into your security posture

Wide application coverage: Protection across a wide range of applications

Compliance view: Easy compliance monitoring and reporting

In today's age of digital transformation, where SaaS applications continue to redefine business, traditional security tools fall short. Embrace CheckRed's new-edge security, leveraging agentless scanning for increased coverage. Prioritize user-centric security and adopt a zero-trust approach to fortify your SaaS environment and protect sensitive data in today's dynamic digital landscape. Elevate your security strategy with CheckRed.

How CheckRed Works

-  **Inspect:** Audit your SaaS and cloud asset inventory based on customized rules with the help of agentless scanners
-  **Detect:** Uncover any risk with a high degree of accuracy and gain total visibility into SaaS and cloud assets
-  **Prioritize:** Classify alerts based on their severity and steer your focus toward issues that matter the most
-  **Remediate:** Receive personalized recommendations for each detected alert in the form of remediation workflows
-  **Report:** View all pertinent security information on a single dashboard and use the ticketing system to respond to alerts

SaaS Security Challenges		CheckRed's Capabilities
Fragmented view of critical assets	→	360° visibility and asset discovery
Risk management challenges	→	Misconfiguration assessment
Unauthorized access	→	Least privilege
Privilege abuse	→	Role-based access control
Alert fatigue	→	Alert prioritization
Third-party app risks	→	Risk analytics
Compliance risks	→	Continuous compliance assessments

Enhance SaaS Security

Organizations can forge a powerful alliance with CheckRed to bolster their SaaS security. By partnering with us, you gain access to cutting-edge expertise that enhances your security posture and protects your sensitive data. Securing your SaaS applications is paramount. Partner with CheckRed to fortify your defenses, access invaluable resources, and connect with our experts. Together, we can navigate the complex realm of SaaS security, ensuring your organization's resilience in the face of evolving threats. Don't wait - empower your SaaS security with CheckRed today.
